Beta Clamps are an economical and easy way of securing pipe, tube, hose, and electrical cables. They are used in industrial, mobile and marine hydraulics, general industrial pipe construction, press technology, instrumentation and control technology, and many other applications.

- Shock absorption, vibration dampening, and noise reducing properties
- Securely and easily anchor clamps to machinery and steel work with weldable plates.
- Easily cleaned
- Ribs in clamp bore absorb shock and vibration in direction of tube axis.
- Upper and lower clamp halves are identical.
- Available in complete units and individual components.

CLAMP BODY

- Standard – Polypropylene (Green Color)
-22°F to 194°F (-30°C to +90°C)
- Aluminum is available for use in high heat applications

CLAMP COMPONENTS – The other metallic components of the clamps are manufactured in:

- Lower and upper plates: steel, stainless steel type 304
- Screw bolts: steel, S40C, stainless steel type 304
- Please call 1.800.323.7053 for information on other metals.

Installation Options

Common Welded Method

Install by welding the weld plate to existing steel

Din Rail Mounted

Attach to C-Rail using ZSI C-Rail Nuts

Strut Mounted

Attach to Wesanco Channel using our exclusive Channel Adapter Nut

Beta Clamps - Standard

Steel w/ Polypropylene Cushion

Steel w/ Aluminum Cushion

BETA STANDARD SERIES

- Cushions are Polypropylene (Green Color)
- Recommended for systems with less than 1,500 psi (103 bar) without dynamic loads.
- Use for standard hydraulics, general pipe construction, electrical cables, and general duty piping applications subject to moderate levels of shock and vibration.
- Aluminum cushions and are used in higher heat applications up to 500°F (260°C).

INSTALLATION - Refer to pages 9 – 11 for complete installation guide.

BETA SMOOTHIE STANDARD SERIES

BETA SMOOTHIE TWIN SERIES

Beta Smoothies are ideal for general-duty applications where there is a need to reduce wear on hose connection caused by vibration and surge.

- Chamfered and smooth core protects hose cover and extends the life of the hose
- Uses Standard Beta hardware
- Reduces wear on hose connection caused by vibration and surge

Beta Adapter

The **BETA ADAPTER** allows a clamping junction to be inserted into virtually any hydraulic line. The exclusive square bodied junction adapter design can be used with metallic tubing or hydraulic hose ends. It provides a point of union for hydraulic runs which transition from one form of conveyance to another (i.e. hose to tubing). Once inserted into the customized Beta Adapter clamp body, the junction point is securely clamped fighting the effects of vibration, insuring a leak-free system.

- Beta Adapter cushions can also be used with rubber inserts.
- Z-Clamp split bushings from Group 1 can be utilized with the basic Beta Adapter Group 4 cushion.
- Z-Clamp bushings from Group 2 coincide with Group 5 Beta Adapter assemblies.
- The split bushings provide extra vibration absorption for delicate clamping surfaces.

INSTALLATION - Refer to pages 9 – 11 for complete installation guide.

Density	—	0.906 g/cm3
Tensile strength	DIN 53454	25-35 N/mm2
Flexure stress limit	DIN 53452	36N N/mm2
Compressive strength	DIN 53454	90 N/mm2
Impact strength	DIN 53453	No break
Thermo Properties		Polypropylene (PP)
Max. temp. resistance		-30 to 90°C
Thermal conductivity		15 x 10 ⁻⁵ /°C
Linear expansion coeff.		0.22 W/[mk]
Electrical Properties		Polypropylene (PP)
Specific volume	DIN 53482	1016 ohm x cm
Chemical Properties		Polypropylene (PP)
Consistent for weak acids, solvents, mineral oils and seawater.

RECOMMENDED CLAMPING FOR BENDS

INSTALLATION ON WELD PLATES

ZSi-Foster weld plates are available for the following Series:

- Standard Series
- Heavy Series
- Twin Series
- Beta Adapters

For best alignment of ZSi-Foster clamps we recommend that you mark their location before welding.

Installation On Weld Plates

- Weld metal welding plates to a weight adjusted base.
- Clip lower half of clamp on to welding plate and insert tube; then add second clamp-half, cover plate, and tighten with screws provided.
- DO NOT weld with plastic clamp in position.
- After assembly the two clamp halves MUST NOT come into contact with each other.

INSTALLATION ON MOUNTING RAILS

ZSi-Foster mounting rails can be used with the following Series:

- Standard Series
- Heavy Series (Group H3 to H6)
- Twin Series
- Beta Adapters

ZSi-Foster mounting rails are available in two different height sizes and are either welded or bolted to the supporting construction.

For Standard Series and Twin Series insert hexagon rail nut and turn to lock. For Heavy Series slide in rail nut.

NOTE: The rail nut will slide within the rail so clamp units can be adjusted before being firmly bolted.

INSTALLATION ON CHANNEL

The ZSA Nuts can be used with any clamp using a 1/4-20 mounting bolt. This includes:

- Standard Series
- Twin Series (T1 Only)
- Beta Rubber Inserts

NOTE: The ZSA Nut will slide within the Channel so clamp units can be adjusted before being firmly bolted.

MULTI-LEVEL ASSEMBLY

ZSi-Foster multi-level pipe clamps permit easy stacking of several tubes or pipes of the same group. The clamps are connected by stacking bolts.

Safety plates are inserted between the clamps to prevent the stacking bolts from turning.

The example below shows a stacking clamp added to a welded clamp, however, ZSi-Foster stacking assemblies can be fitted to weld plates, rails, or strut in the same manner.

(1) After the Top Cushion is Added, Secure it with the Stack Bolts

(2) Add Safety Plate to Prevent Stacking Bolts from Turning

(3) Assemble Another Clamp Onto the Stacking Bolt in Same Manner as Single Clamps are Installed

Stacking Assembly

- Weld on welding plate with a fixing bracket.
- Wedge on lower clamp-half, insert tube, add upper clamp-half and tighten with fixing screws.
- Apply a locking plate to upper half of the clamp to prevent fixing screw from twisting.
- Mount the second tube clamp in exactly the same way.

INSTALLATION OF BETA ADAPTER

Beta Adapters are installed in much the same manner as Beta Clamps. The weld plate is welded onto existing structure and the Beta cushion and adapter is assembled onto it.

(1) Weld Plate to Supporting Steel

(2) Push Bottom Half of Clamp Onto Plate

(3) Insert the Desired Adapter

(4) Add Top Cushion

(5) Add Top Plate and Bolt into Position

BETA Hydraulic Clamps™

Beta Standard Series

- For standard hydraulics and systems with less than 1500 PSI without dynamic loads
- Polypropylene cushion and steel components

Beta Twin Series

- For standard hydraulics, general pipe construction and electrical cables
- Polypropylene cushion and steel components

Beta Cushions Now Made in the USA

Beta Twin Smoothie Series

- Reduces wear on hose connection caused by vibration and surge.
- Chamfered and smooth core protects hose cover and extends hose life.
- Uses Beta Twin hardware
- Polypropylene cushion and steel components

Beta Adapter Series

- Allows a clamping junction to be inserted into hydraulic lines
- The adapter body is offered in two sizes for use with the Z-Clamp adapter inserts

Beta Heavy Series

- For systems with greater than 1500 PSI operating pressure, operations with pressure surges, and applications with wide temperature fluctuations.
- Absorbs high levels of shock, noise, and vibration
- Polypropylene cushion & steel components

Beta Special Metals Series

- Aluminum cushions with steel components are used in high heat applications up to 500°F
- Stainless steel clamp hardware with polypropylene cushion are used in applications where external corrosion is a concern.

Beta Rubber Inserts Series

- Available in standard and heavy
- One cushion block provides flexible size range of cushioning.
- Smooth bore core can be used on hose, or for vibration reduction

Beta Standard Smoothie Series

- Reduces wear on hose connection caused by vibration and surge.
- Chamfered and smooth core protects hose cover and extends hose life.
- Uses Beta Standard hardware
- Polypropylene cushion & steel components
